Electric energy consumption and electric range values will vary dependent on vehicle specification.

Build your BMW, view the CO₂, fuel consumption, electric energy consumption and equivalent all-electric range figures for your chosen model and decide the specification using the [online configurator](#).

* = The BMW i4 is a battery electric vehicle requiring mains electricity for charging. Whilst we recommend the battery for this vehicle is charged to 80% to help optimise the life of your battery, the electric range figure shown is the WLTP figure after the battery had been fully charged to 100%. WLTP figures are shown for comparability purposes. Only compare fuel consumption, CO₂ and electric range figures with other cars tested to the same technical procedures. WLTP has been used as the applicable CO₂ figure from 1 January 2024 for vehicle registration tax (VRT).
